BEESKILLED ONLINE INTERNSHIP

Data Science with Python

A 6-Week Online Internship Presentation Report

INTERNSHIP DURATION

17 July 2026 – 28 August 2026

STUDENT CREDENTIALS

Kajal Singh

Roll No.
25SCS1003005554

Program
B.Tech (CSE)

HOST ORGANIZATION

BeeSkilled

Online internship in Data Science with Python

Candidate & Program Overview

Candidate Details

Student Name: KAJAL SINGH

Roll Number: 25SCS1003005554

B.Tech (Computer Science & Engineering)

2026-2027

University: IILM University, Greater Noida, U.P.

Internship Profile

Program Name: BeeSkilled Online Internship

Specialization Domain: Data Science with Python

Duration: 6 Weeks (17 July – 28 August 2026)

Organization Profile: BeeSkilled

BeeSkilled is an online learning and internship platform that provides students with structured learning programmes, assignments, projects, and assessments.

Learning Approach: Provides hands-on practice through weekly assignments, practical tasks, and project-based learning.

Internship Domain: Data Science with Python, covering data analysis, visualization, Machine Learning, and real-world datasets.

Practical Work: Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, and Jupyter/Google Colab.

Problem Statement & Project Context

The Learning Challenge

Raw data by itself does not provide useful information. It must be collected, cleaned, analysed, and visualized properly to obtain meaningful insights.

Students also need practical exposure to data handling, missing-value treatment, statistical analysis, visualization, and introductory Machine Learning.

The Project Scope

The internship focused on the basic Data Science workflow using Python, from dataset loading and preprocessing through EDA and visualization.

Practical assignments covered Student Performance, COVID-19, and Titanic datasets, with Linear Regression introduced for prediction.

Core Project Objectives

Data Handling

Use Python, Pandas and NumPy to create and manipulate DataFrames, clean data, and handle missing values.

Statistical Analysis

Calculate mean, median, mode, minimum and maximum values to understand dataset characteristics.

Data Visualization

Perform EDA and create trend lines, country comparisons, heatmaps and scatter plots using Matplotlib and Seaborn.

Machine Learning

Understand basic Machine Learning, apply Linear Regression, split data into training/testing sets, and evaluate performance.

Technologies & Data Science Toolchain

Python & Data Handling

Python, Pandas, NumPy
Jupyter Notebook / Google
Colab

Notebook-based coding and
project execution

Visualization

Matplotlib, Seaborn
Charts, heatmaps, scatter plots

EDA and graphical
representations

Machine Learning

Scikit-learn
Linear Regression, train/test
split

Prediction and model
evaluation

Datasets

CSV datasets
Student Performance, COVID-
19, Titanic

Real-world datasets used for
practical analysis

Data Science Workflow

Data Layer: CSV datasets such as Student Performance, COVID-19 and Titanic.

Processing Layer: Python, Pandas and NumPy for cleaning, missing values and manipulation.

Analysis Layer: Statistical analysis and Exploratory Data Analysis (EDA).

Visualization Layer: Matplotlib and Seaborn for graphs, plots and heatmaps.

ML & Results Layer: Linear Regression, prediction, evaluation and interpretation of insights.

Methodology (Weeks 1 to 4)

Week 1

Data Analysis with Python
Pandas & NumPy, DataFrames,
missing values, sorting, and
mean/median/mode.

Week 2

Data Visualization
COVID-19 dataset; trends, top-five
country comparison, heatmap and
scatter plot.

Week 3

Machine Learning Introduction
Student Performance prediction
using Linear Regression, train/test
split and evaluation.

Week 4

Final Data Analysis Project
Titanic Dataset analysis, survival
insights, Python notebook and
project report.

Project Scope & Expected Outcomes

Key Projects & Demonstrated Skills

- ✓ **Data Analysis with Python:** Created and analysed DataFrames using Pandas and NumPy; handled missing values and calculated summary statistics.
- ✓ **COVID-19 Data Visualization:** Used Matplotlib and Seaborn to explore trends, country comparisons, heatmaps and scatter plots.
- ✓ **Student Performance Prediction:** Applied Linear Regression using student-related features such as hours studied, previous scores and sleep hours.
- ✓ **Titanic Data Analysis Project:** Performed survival analysis on the Titanic dataset and prepared a Python notebook and project report.

Certification & Official Verification

Verification Metric	Official Record / Credential Details
Student Name	Kajal Singh
Roll Number	25SCS1003005554
Internship Title	Data Science with Python
Issuing Organization	BeeSkilled
Internship Period	17 July 2026 – 28 August 2026
Completion Certificates	Data Science and Python — issued 28 August 2026

Certification & Official Verification

Data Science Internship Certificate

Python Internship Certificate

Thank You!

Kajal Singh

Roll No: 25SCS1003005554
